All prices include VAT and exclude shipping and installation.

Draught Beer Installation

Below are the most common types of complete draught units. All prices are ex SDS warehouses, and exclude delivery and installation.

The pricing below is for the basic models (eg Towers and Coolers), and can be upgraded and changed.

Oak Barrel (1 Tap) - R9 291 ex VAT

This is our most economical complete draught system. The system comes complete with Gas Regulator and keg coupler (you can choose which keg coupler you require), all that is required is the CO2 gas and keg of beer. Just simply add ice, and the unit is ready to be used.

Ideal for home use, and is very easy to move around.

Stainless Box with Metal Tower - R14 421

An ideal unit for home use, in a modern looking bar. Comes complete with gas regulator and keg coupler (you can decide on which keg coupler you require). All you need is CO2 gas, a keg of beer. Just add ice and the unit is ready to be used.

Pygmy 1 Tap - R14 421

The smallest electrical unit we have. Ideal unit for home use, as it has a capacity of 25l per hour. It comes with a built-in air compressor, so if you plan on finishing the keg of beer within a couple of day, then there is no need for CO2 gas. If you don't plan on finishing the keg within 2-3 days, then you can always purchase a gas regulator.

Due to the small size of the unit (and the dry technology), this unit is very mobile.

1 Tap Mini Lady (Counter Top) - R22 201.50

One of our best selling units. This unit is placed on top of the bar counter, and the keg is placed on the floor. The unit comes complete with gas regulator and keg coupler, and is pretty much "plug and play". The unit needs to be filled with water, then connected to an electrical supply, and is ready to be used in 2 hours. The design of this unit can be changed, and we have various different options of towers available.

It is not advisable to move this unit.

2 Tap Kontakt 70 – R22 264.20

A high capacity unit that is capable of pouring 70l/hr comes complete with CO2 gas regulator and keg couplers. Once switched on, then it is ready to be used in 10 minutes.

Due to the fact that this unit used Dry Technology, the unit is easily moved.

1 Tap Under Counter – R21 603

This is what you see in most bars you visit. The tower is installed on top of the bar counter, and the cooling unit is installed under the bar counter. A complete system is provided (all fittings, keg coupler and piping) – installation is not included, and would need to be quoted on.

Additional Taps and Towers can be added to this system, and we have a

large selection of Tower available to chose from
